

NEW & IMPROVED

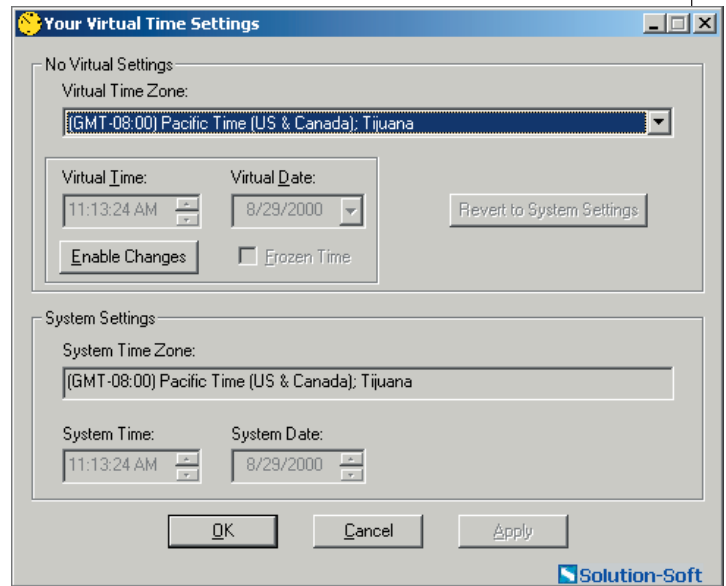

APPLICATION

Run Applications in One Time Zone

Solution-Soft announced Time Machine, date-simulation software that facilitates testing and simulation of specified system dates and times without requiring you to modify or reset the system clock. Time Machine supports all time zones on one server. The software simulates local time for email programs, scheduling software, and server processes to a remote server in a different

time zone. Solution-Soft designed Time Machine to benefit Windows NT Server 4.0, Terminal Server Edition (WTS) and Citrix MetaFrame and NFuse users, as well as application service providers (ASPs) that provide services to different time zones.

Time Machine runs on Windows 2000 and NT and costs \$2,995 for a single-server license. Contact Solution-Soft, 888-884-7337, or www.solution-soft.com. ▲
